

Problem

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

Input Format

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

Constraints

$1 \leq n \leq 10^5$ $1 \leq arr[i] \leq 10^4$

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

```
5
10 20 30 40 50
```

Sample Output 0

```
150
```

```
3 9 public class Main {
4 10     public static void main(String[] args) {
5 11         Scanner sc = new Scanner(System.in);
6 12         int n = sc.nextInt();
7 13         int[] arr = new int[n];
8 14         for (int i = 0; i < n; i++) {
9 15             arr[i] = sc.nextInt();
10 16         }
11 17         int currentSum = arr[0];
12 18         int maxSum = arr[0];
13 19         for (int i = 1; i < n; i++) {
14 20             if (arr[i] > arr[i - 1]) {
15 21                 currentSum += arr[i];
16 22             } else {
17 23                 currentSum = arr[i];
18 24             }
19 25             if (currentSum > maxSum) {
20 26                 maxSum = currentSum;
21 27             }
22 28         }
23 29         System.out.println(maxSum);
24 30     }
25 31     sc.close();
26 32 }
27 33 }
```
